

Geography Week 13

Climate Zones & Climate Graphs

Tasks:

Lesson 1. Read through 'World Climate Zones Presentation' to remind yourself of the features of different climate zones. Then complete the matching cards exercise.

Lesson 2. Complete Interpreting a Climate Graph sheet. Write down an explanation for why you matched each graph with a certain climate zone.

Lesson 3. Create a climate graph for London, using the data in the 'Creating your own Climate Graph' pdf.

Watch: <https://www.youtube.com/watch?v=v90UiRG4QxU> if you need additional help with your graph.

Lesson 4. Choose 1 type of climate zone. Create a poster featuring facts about that zone (e.g. temperature, weather and countries). Do not include information about plants or animals- this will come later! Do your own research as well as using the information you've already discovered.

Lesson 5. Do you think an area's climate zone can change? Write 2-3 paragraphs, using evidence to support your answer.
